## 1 Definitions

Grid, Boxes and Cells: the grid is composed by 9 boxes, and each box is composed by 9 cells.

Unit: a group of 9 cells which must each contain a different digit in the solution. A unit can be a row, a column or a box

Digit: the numerical value which must be placed in the cells
Candidate: a possible solution for an unsolved cell. In a single cell each digit is a candidate (example 1), while in a unit for a given digit there can be many candidates (example 2) and (example 3)

Constraint: a group of candidates of which only one can be true

Unit Constraint: a constraint for a single digit within a unit

Link: a link is a connection between two cells in a unit that have a common digit

Strong Link: a link between two candidates when one of them must be true. If thefollowing logical deductions can be made for candidates $A$ and $B$, they have a strong link:

$$
\begin{array}{llll}
\text { IF } & A & \text { IS FALSE } \Rightarrow B & \text { MUST BE TRUE } \\
\text { IF } & B & \text { IS FALSE } \Rightarrow A & \text { MUST BE TRUE }
\end{array}
$$

Strong links can be present in

- bivalue cell, i.e. a single cell with only two candidates left (two candidates, two digits) (example 1)
- bilocation unit, i.e. unit constraint with only two candidates left for a single digit (two candidates, one single digit, see Conjugate Pair) (example 3)

For bivalue cells and bilocation units a strong link enforces a weak link

Weak Link: a weak link means that at most one of the two statements is true (example 2)

Conjugate Pair (CP): a pair of candidates for a single digit with a strong link, i.e. the last two candidates for a single digit in a unit (example 3)

Example 1: strong link in bivalue cells

| 9 | 7 |  | $\begin{array}{r} 2 \\ 4 \\ 8 \end{array}$ | 3 8 | $45{ }^{3}$ | 2 8 | 1 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | 2 | ${ }^{1}$ |  | $\begin{array}{\|ll\|} \hline 1 & \\ & \\ \hline \end{array}$ |  | 89 | 7 | 3 |
| 6 | 8 | $1 \quad 3$ | $\begin{array}{r} 2 \\ 7 \end{array}$ | 1 3 <br> 7  | 3 9 | 2 <br> 9 | 4 | 5 |

In row 2 col 4 assume candidate $\mathbf{A}$ is digit 6 and candidate $\mathbf{B}$ is digit 8:

$$
\begin{aligned}
& A \neq 6 \Rightarrow B=8 \\
& B \neq 8 \Rightarrow A=6
\end{aligned}
$$

Same way for digits 2 and 9 in row 3 col 7 .
Example 2: weak link

| 9 | 7 |  | $\begin{array}{r} 2 \\ 4 \\ 8 \end{array}$ | $\begin{aligned} & 3 \\ & 8 \end{aligned}$ | $45{ }^{3}$ | $\begin{array}{r} 2 \\ 8 \end{array}$ | 1 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | 2 | ${ }^{1}$ | $8^{6}$ | $\begin{array}{\|ll\|} \hline 1 & \\ & \\ & 6 \\ \hline \end{array}$ | 59 | 89 | 7 | 3 |
| 6 | 8 |  | $\begin{array}{r} 2 \\ 7 \\ \hline \end{array}$ | $\begin{array}{ll} \hline 1 & 3 \\ 7 & \\ \hline \end{array}$ | $3$ | 2 | 4 | 5 |

Assume candidate $\mathbf{A}$ is digit 8 in row $1 \operatorname{col} 5$ and candidate $\mathbf{B}$ is digit 8 in row 1 col 7 :

## 1 DEFINITIONS

$$
\begin{aligned}
& A \neq 8 \nRightarrow B=8 \\
& B \neq 8 \nRightarrow A=8
\end{aligned}
$$

since there are more than two cells that can be 8 in row 1 (row 1 col 4 ).

Example 3: strong link in bilocation units

| 9 | 7 |  | ${ }^{2} \begin{array}{r}2 \\ 8\end{array}$ | 88 | $45^{3}$ | $\begin{aligned} & 2 \\ & 8 \end{aligned}$ | 1 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 4 | 2 | ${ }^{1}$ | $8{ }^{6}$ | $\begin{array}{\|ll\|} \hline 1 & \\ \hline & \\ \hline \end{array}$ | 59 | 89 | 7 | 3 |
| 6 | 8 | $1 \quad 3$ | 2 7 | $\begin{array}{ll} \hline 1 & 3 \\ 7 & \end{array}$ | $3$ | $2$ | 4 | 5 |

Assume candidate $\mathbf{A}$ is digit 9 in row 3 col 6 and candidate $\mathbf{B}$ is digit 9 in row 3 col 7 :

$$
\begin{aligned}
& A \neq 9 \Rightarrow B=9 \\
& B \neq 9 \Rightarrow A=9
\end{aligned}
$$

Therefore 9 in row 3 col 6 and 9 in row 3 col 7 form a conjugate pair, because they are the last two candidates for digit 9 in row 3.

## 2 Basic Solving Techniques

### 2.1 Naked Singles

| A single digit, | is restricted to | a single cell |
| :--- | :--- | :--- |
| and only this |  |  |
| digit |  |  |

Example 4

|  |  | 3 | 1 | 2 | 3 | 1 | 2 | 3 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 7 | 8 | 9 |  |  | 9 | 7 | 8 | 9 |
|  |  |  | 1 | 2 |  | 1 | 2 |  |
|  |  |  |  | 5 |  |  | 5 |  |
|  |  | 9 |  |  | 9 |  |  | 9 |
|  | $\mathbf{6}$ |  |  |  |  | 1 |  | 3 |

## Hidden Singles

### 2.2 Hidden Singles

A single digit,
which might be
hidden among
is restricted to a single cell
other digits

## Example 5

| $\mathbf{4}$ |  | $\mathbf{7}$ | 1 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  | 5 |  |  |  |
| $\mathbf{3}$ |  | $\mathbf{8}$ | 1 |  |  |
|  |  | 5 | 6 |  |  |
| $\mathbf{2}$ | 1 |  | 1 |  |  |
|  |  | 9 |  |  |  |

### 2.3 Locked Candidates

A single digit, which might be hidden among other digits

is restricted to | box or a single |
| :---: |
| column of a box |

This type causes eliminations either

- in the row or column of the entire unit (example 6) or
- eliminations in the box (example 7)

## Example 6

## Example 7

\begin{tabular}{|c|c|c|}
\hline 4 \& \[
\begin{aligned}
\& \hline 1 \\
\& \hline
\end{aligned}
\] \& 7 \\
\hline 2
5 \& 8 \& \(1{ }^{1} 5\) \\
\hline 6 \& \(\begin{array}{ll}1 \& 2 \\ \\ \& 5 \\ \& \\ \& 9\end{array}\) \& \(\begin{array}{lll}1 \& \\ \& 5 \\ \& \& \\ \& \& 9\end{array}\) \\
\hline \(7^{7} \quad 9\) \& \(\begin{array}{lll}1 \& \\ 4 \& 5 \\ 7 \& \& \\ \& \end{array}\) \& \begin{tabular}{lll|}
1 \& \& \\
4 \& 5 \& 6 \\
\& \& 9
\end{tabular} \\
\hline \[
\begin{array}{r}
2 \\
7
\end{array}
\] \& 3 \& \[
1
\] \\
\hline \[
\begin{aligned}
\& \hline 2 \\
\& 5 \\
\& \hline
\end{aligned}
\] \& 2
5

9 \& 56
89 <br>
\hline 1 \& $\begin{array}{lll}4 & 5 \\ 7 & 9\end{array}$ \& $4 \begin{array}{cc} & 5 \\ & \\ & 9\end{array}$ <br>

\hline $$
7^{5}
$$ \& 6 \& 3

45 <br>
\hline 8 \& 45 \& 2 <br>
\hline
\end{tabular}

### 2.4 Naked Pairs

|  | two cells in a |  |
| :--- | ---: | ---: |
| single row |  |  |
| Two digits, and | are restricted to | (example 8) or |
| only these two | two cells in a |  |
| digits |  | single column or |
|  | two cells in a |  |
| single box |  |  |

## Example 8

| 7 | $\begin{array}{ll}1 & 2 \\ 4 & 5\end{array}$ | 1 4 | 2 4 | 9 | 8 | 8 | 8 | 3 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Hidden Pairs

### 2.5 Hidden Pairs

two cells in a
single row
Two digits, which might be hidden among other are restricted to digits (example 9) or two cells in a single column or two cells in a single box (example 10)

## Example 9

| $\mathbf{8}$ | 5 | $\mathbf{1}$ | 2 |  | 3 |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Example 10

|  | $\mathbf{7}$ |  | 2 | 3 |
| :--- | :--- | :--- | :--- | :--- |
| 1 | 2 |  | 2 | 3 |
|  | 5 |  | $\mathbf{8}$ | $\mathbf{4}$ |
| 1 |  | 9 |  |  |
|  | 5 |  | $\mathbf{6}$ | 5 |
|  |  | 9 |  | 3 |

### 2.6 Naked Triples

|  | three cells in a |  |
| :--- | ---: | ---: |
| single row or |  |  |
| Three digits, and |  |  |
| only these three |  |  |
| digits | are restricted to | three cells in a |
| single column or |  |  |
| three cells in a |  |  |
| single box |  |  |
| (example 11) |  |  |

The cells which make up a Naked Triple don't have to contain every digit of the triple.

## Example 11

| 1 |  | 1 |  | 1 |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  | 6 |  | 5 |  | 5 |
|  |  | 7 | 8 | 7 |  |
| 1 | 3 | 1 |  | 3 |  |
| 4 |  | 4 | 5 |  |  |
|  |  | $\mathbf{2}$ | 8 |  |  |
| 1 |  |  |  | 1 |  |
| 4 | 6 |  | $\mathbf{9}$ | 4 |  |

### 2.7 Hidden Triples

three cells in a single row
Three digits, which might be hidden among other digits
are restricted to (example 12) or three cells in a single column or three cells in a single box (example 13)

The cells which make up a Hidden Triple don't have to contain every digit of the triple and these three digits.

## Example 12

| 12 | $\begin{array}{ll}1 & 2 \\ 4 & \\ & 8\end{array}$ |  | 2 8 | 9 | 4 7 | 2 | 4 | 2 8 |  | 2 | 9 | 9 | 5 | 4 | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## Example 13

| 9 | ${ }^{4}{ }_{8}{ }^{6}$ | 3 6 |
| :---: | :---: | :---: |
| 3 5 | 56 | 7 |
| 2 | $\begin{array}{lll} \hline 1 & & \\ 4 & & 6 \\ & 8 \end{array}$ | $\begin{array}{ll}1 & 3 \\ 4 & 6\end{array}$ |

Naked Quads

### 2.8 Naked Quads

|  | four cells in a <br> single row or four |  |
| :--- | ---: | ---: |
| Four digits, and | cells in a single |  |
| only these four |  |  |
| digits | are restricted to | column or four |
| cells in a single |  |  |
|  |  |  |
|  |  |  |
|  | (example 14) |  |

The cells which make up a Naked Quad don't have to contain every digit of the quad.

## Example 14

|  |  |  | 1 |  | 1 |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  | 5 |  | 4 | 5 | 4 | 5 | 6 |
| 7 |  | 9 | 7 |  |  |  |  |
|  | 2 |  |  | 3 | 1 |  |  |
| 7 |  |  |  | $\mathbf{3}$ |  |  |  |
| 7 |  |  |  |  |  | 8 |  |
|  | 2 |  |  | 2 |  |  |  |
| 5 |  |  | 5 |  |  | 6 |  |
|  |  | 9 |  |  |  | 8 |  |

## 3 Medium Solving Techniques

### 3.1 X-Wing

| Two CP related | exactly the same |
| :--- | ---: |
| to a single digit, | two columns |
| each of them | are restricted to |
| located in a row <br> (or a column) |  |

Example 15

|  | 4 | 3 | 9 | 8 | 6 | 2 | 5 | 6 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 6 |  |  | 4 | 2 | 5 |  |  |  |
| 2 |  |  |  | 6 | 1 | 6 | 9 | 4 |
| 9 | 6 | 6 |  |  | 4 | 6 | 7 | 6 |
| 3 |  |  | 6 |  | 8 |  |  |  |
| 4 | 1 | 6 | 2 |  | 9 | 6 | 6 | 3 |
| 8 | 2 |  | 5 | 6 | 6 |  | 6 | 6 |
|  | 6 | 6 |  | 4 |  |  |  | 5 |
| 5 | 3 | 4 | 8 | 9 | 6 | 7 | 1 | 6 |

### 3.2 Swordfish

The Swordfish pattern is a variation on the "X-Wing" pattern above specified.

| A single digit <br> staying in three <br> rows (or columns) | is restricted to | the same three <br> columns (or rows) |
| :--- | ---: | ---: |

The presence of the digit in each row (or in each column) can be restricted to a CP (respectively example 16 and example 17), but this is not a necessary condition (example 18).

The X-Wing and Swordfish techniques can be further generalised to include rows containing digits restricted to four cells in the same four columns (called a Jellyfish, which is an advanced solving technique).

Example 16: two cells swordfish by row

| 5 | 1 |  | 5 | 5 |  | 8 | 5 | 3 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 5 |  | 4 | 5 | 8 | 1 | 5 | 6 |  |
| 9 | 5 | 5 | 4 |  | 3 | 5 | 5 | 6 |
|  | 2 | 5 |  | 6 |  | 5 | 1 |  |
|  |  |  | 8 |  | 5 |  |  | 7 |
| 1 | 6 | 5 | 5 | 3 |  | 4 |  | 1 |
| 1 | 5 | 6 | 5 |  |  | 2 |  |  |
|  |  |  | 1 | 7 |  | 6 | 3 | 5 |

Example 17: two cells swordfish by column

| 5 | 1 |  | 5 | 5 |  | 8 | 5 | 3 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
| 5 |  | 4 | 5 | 8 | 1 | 5 | 6 |  |
| 9 | 5 | 5 | 4 |  | 3 | 5 | 5 | 6 |
|  | 2 | 5 |  | 6 |  | 5 | 1 |  |
|  |  |  | 8 |  | 5 |  |  | 7 |
| 1 | 6 | 5 | 5 | 3 |  | 4 |  | 1 |
| 1 | 5 | 3 | 6 | 5 |  |  | 2 |  |
|  |  | 1 | 7 |  | 6 | 3 | 5 |  |

Example 18: three cells swordfish

|  |  | 5 | 2 | 1 | 7 |  | 6 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 1 | 9 | 4 | 6 | 3 | 2 |  | 5 |
| 2 | 6 | 7 | 9 | 5 | 8 | 7 | 1 | 7 |
| 4 | 7 | 6 | 1 | 8 | 2 | 7 | 5 | 7 |
|  |  |  | 7 | 4 | 5 | 1 |  | 6 |
| 1 | 5 |  | 3 | 9 | 6 | 4 |  | 8 |
| 6 | 3 | 1 | 5 | 7 |  |  |  | 2 |
| 5 | 7 | 7 | 8 | 2 | 1 | 6 | 3 | 7 |
| 7 | 2 | 7 | 6 | 3 |  | 5 | 7 | 1 |

Two String Kite

### 3.3 Two String Kite

Two CP related
to a single digit,
one located in a
row and the other linked
located in a
column

Note that

- the cells in both the CP must be in different boxes
- the cells in the common block must be distinct

Example 19: the first CP is in col 3 (9) and the second one is in row 9 (9).

|  |  |  | 7 | 8 | 9 | 4 |  | 9 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | 9 | 9 | 9 |  | 9 |
| 9 |  |  | 6 |  |  |  | 3 |  |
| 8 | 9 | 5 | 4 | 6 | 9 | 7 | 1 | 9 |
|  | 9 | 9 | 9 |  | 9 | 9 |  | 9 |
|  | 1 | 4 | 9 | 9 | 8 | 9 |  | 6 |
|  | 6 | 9 | 9 | 9 | 9 |  |  | 5 |
|  |  |  |  |  | 4 | 6 | 9 |  |
|  | 9 | 7 | 9 |  | 6 |  |  |  |

Example 20: the first CP is in col 1 (4) and the second one is in row 2 (4).

\begin{tabular}{|c|c|c|c|c|c|c|c|c|}
\hline 2
4
4 \& 2
4 \& 1 \& 9 \& 23 \& 7 \& 56 \& 456 \& 8 <br>
\hline 6 \& $$
\begin{array}{r}
2 \\
4 \\
\hline
\end{array}
$$ \& $$
\begin{array}{l||}
\hline 2 \\
\\
9
\end{array}
$$ \& 1 \& 8 \& 5 \& 7 \& 3 \& $$
\begin{array}{r}

4

8 \& 5 \& $\begin{array}{ll}2 & 3 \\ & 6\end{array}$ \& 7 \& 1 \& 9 \& ${ }^{4}{ }^{8}$ \& |  |
| :---: | :---: |
| 4 |
| 6 | <br>

\hline 2 \& 1 \& $$
\left.\begin{array}{ll|}
\hline 2 & 3 \\
& 6 \\
& 9
\end{array} \right\rvert\,
$$ \& 8 \& 4 \& $\begin{array}{rr}2 & 3 \\ 6\end{array}$ \& 3

56 \& 56 \& 7 <br>
\hline 7 \& ${ }^{4}{ }_{8} 6$ \& $8^{6} \begin{array}{r}3 \\ 6\end{array}$ \& 3
6 \& 5 \& 9 \& 2 \& $\begin{array}{lll}1 & & \\ 4 & & 6 \\ & 8\end{array}$ \& $\begin{array}{ll}1 & 3 \\ 4 & 6\end{array}$ <br>
\hline
\end{tabular}

Example 21: the first CP is in column 3 (9) and the second one is in row 4 (9).

| 4 | 8 | 6 | 5 | 2 | 7 | 1 | 9 | 3 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | 1 |  |  | 6 9 | 5 | 8 | $\begin{aligned} & 2 \\ & 7 \end{aligned}$ |
|  |  | $7 \quad 9$ | $\begin{array}{r} 3 \\ 8 \end{array}$ |  | $\begin{array}{\|lll} \hline 1 & & \\ & 8 & 9 \end{array}$ | 6 | $\begin{aligned} & 2 \\ & 7 \end{aligned}$ | 4 |
| 6 | $\begin{array}{ll} \hline \hline 1 \\ 5 & \\ & \\ \hline \end{array}$ | 8 | $\begin{array}{\|l} 4 \\ 7 \end{array}$ | $\begin{array}{\|l} 4 \\ 7 \\ \hline \end{array}$ | 59 | 2 | 3 | ${ }^{1} 5$ |
|  |  | $7 \quad 9$ | 1 | $5_{9}$ | 3 | 4 | 6 | 8 |
| $1_{5}$ | 4 | 3 |  | 8 | ${ }^{2} 6$ | 7 | ${ }^{1}$ | 9 |
| 8 | 6 | 5 |  |  | $12$ | 9 | 4 | 12 |
| 9 | 7 | 4 | $\begin{aligned} & 2 \\ & 8 \end{aligned}$ | $1_{5}$ |  | 3 | 12 | 6 |
| 13 | $13$ | 2 | 9 | 6 | 4 | 8 | $7^{5}$ | $7^{5}$ |

## 4 Advanced Solving Techniques

### 4.1 XY-Wing

Its name comes from the pattern formed by the numbers and it is not related to "X-Wing".

| Two couples of |  |  |
| :--- | ---: | ---: |
| candidates (in |  |  |
| bivalue cells), | are linked | by being in the |
| respectively | same unit |  |
| $([X Y],[X Z])$ and |  |  |
| $([X Y],[Y Z])$ |  |  |

Then $Z$ can be eliminated from the candidates of all cells that occupy the intersection of the units containing $[X Z]$ and $[Y Z]$.

Examples of possible combinations:

|  |  |  |  |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  | XY |  |  | XZ |  |
|  |  |  |  |  |  |
|  |  |  |  |  |  |
|  | YZ |  |  | $*$ |  |
|  |  |  |  |  |  |

| $*$ | XY | $*$ |  | XZ |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  |  |  |  |
| YZ |  |  | $*$ | $*$ | $*$ |

Example 22: $X$ is $1, Y$ is 8 and $Z$ is 2.

| $\mathbf{4}$ | $\mathbf{8}$ | $\mathbf{6}$ | $\mathbf{5}$ | $\mathbf{2}$ | $\mathbf{7}$ | $\mathbf{1}$ | $\mathbf{9}$ | $\mathbf{3}$ |  |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |
|  |  |  | $\mathbf{1}$ |  |  |  |  |  |  |
